

Attestation

As part of a research assignment of AC Blue Planet, Hans-Sauerbruch-Straße 13, 78467 Konstanz, Germany, RECON Freiburg conducted a randomized, placebo controlled, double-blind documentation study whose aim was to replicate the effectiveness of the Vita Chip E in chronic and recurring pain.

The main outcomes of the study were as follows:

- 1. The Vita Chip E's specific effect exceeded the unspecific effects (e.g. natural pain course, placebo effect) by more than 150 percent.**
- 2. The Vita Chip E reduced pain intensity from moderate-strong to small (effect size: $d = 1.4$).**
- 3. The Vita Chip E cut by half the time until pain noticeably decreased. The reduction was from 57 minutes to 25 minutes (55 per cent).**
- 4. The Vita Chip E reduced the time pain lasted by over one hour (84 minutes).**
- 5. The Vita Chip E improved overall wellbeing by 9 percent.**
